**SOA**

**S90-01**

*Fundamental SOA & Service-Oriented Computing*

services that can provide the logic required to automate the new business process and then change how the services within the solution need to be composed, as required.

D. Due to the fact that service-oriented solutions are inherently unable to adapt to business process change, you should investigate for how long you can continue to use your current solution. Even if it does not exactly provide the functionality required by the new business process, it is still likely to automate a subset of the new business process logic, thereby providing you with an opportunity to continue to get some value from the solution before you are forced to retire it.

**Answer:** C

**Question:** 65

Which of the following statements makes sense?

A. I am going to register my new service in the service registry so that other project teams can discover it in order to determine whether they should reuse it as part of service-oriented solutions they are planning to build.

B. I am going to register my new service inventory in the service registry in order to improve the performance of my service-oriented solution, because other services in my service composition will be able to dynamically discover and retrieve the new service much faster than if it was not registered in the service registry.

C. I am going to register my new service in the service registry because Service Registration is one of the eight principles of service-orientation.

D. None of these statements make sense.

**Answer:** A

**Question:** 66

Which of the following is a recommended or common part of a service-oriented enterprise?

A. business services

B. service registries

C. service contracts

D. all of the above

**Answer:** D

**Question:** 67

I anticipate building larger service compositions comprised of more services. How will this likely affect performance and infrastructure?

A. It will likely increase performance demands and require an increase in infrastructure investment.

B. It will likely reduce performance demands and require an increase in infrastructure investment.

- C. It will likely increase performance demands and require a reduction in infrastructure investment.
- D. It will not affect performance or infrastructure.

**Answer:** A

**Question:** 68

Service A invokes ServiceB. Service B invokes ServiceC. Service C invokes both Service D and Service E. In this runtime scenario, which services are acting as service consumers?

- A. Service A, Service B, Service C
- B. Service D, Service E
- C. Service A
- D. None, because a service cannot also be a service consumer.

**Answer:** A

**Question:** 69

When following the distinct lifecycle phases of an SOA delivery project you are:

- A. discouraged from involving business analysts as part of the definition of services so that services remain technically focused
- B. discouraged from involving technology experts as part of the definition of services so that services remain business focused
- C. encouraged to have business analysts and technology experts collaborate in the definition of services so that services have and retain an alignment of technology and business
- D. none of the above

**Answer:** C

**Question:** 70

When you establish a federated service layer, you end up creating:

- A. a unified set of service contracts for the benefit of those building service consumers
- B. a unified set of service consumer programs for the benefit of those building services to be consumed by those programs
- C. a unified set of service compositions for the benefit of those responsible for defining service inventory boundaries
- D. all of the above

**Answer:** A

**Question:** 71

A service-oriented solution can be comprised of a single service with a single service capability.

- A. True
- B. False

**Answer:** A

**Question:** 72

Service-oriented architecture must be designed to be both integration-centric and silo-based.

- A. True
- B. False

**Answer:** B

**Question:** 73

Service-oriented analysis and service-oriented design are typical phases of an SOA delivery lifecycle.

- A. True
- B. False

**Answer:** A

**Question:** 74

The Universal SOA Commission (USOAC) has been standardizing the service-oriented architectural model since 1998. Their role is to regulate the marketplace to ensure that all usages of the "SOA" acronym for branding purposes are legitimate. They enforce this via product assessment and certification, a process that all of the major software vendors follow to obtain official USOAC certification.

- A. True
- B. False

**Answer:** B

**Question:** 75

Service-orientation supports the realization of the strategic goals associated with service-oriented computing.

- A. True
- B. False

**Answer:** A

**Question:** 76

There can be different types or scopes of service-oriented architecture. For example, you could define separate architecture specifications for a service and a service inventory.

- A. True
- B. False

**Answer:** A
