QUESTION: 66

After creating a Software Policy and configuring it to perform the intended software install, you try to attach a managed server you normally work with the software Policy, and are unable to locate the managed server in the “Attach Server” selection list. What is the most likely cause?

- A. permissions to the managed server
- B. permissions to the software policy
- C. OS mismatch between policy definition and managed server
- D. conflicting software already installed on the managed server

Answer: D

QUESTION: 67

Match each tab name to the major area of the HPSA client to which it gives access.

KILLEXAMS.COM

Library tab	Reports tab	tab name	access
Devices tab	Virtualization tab		Shows all your servers and lets you manage them
Jobs and Sessions tab	Administration tab		Shows all your Virtualization Services, Virtual Machines, VM RTemplates, and lets you manage some of them
			Shows everything needed to manage servers, such as patches, patch policies, software packages, audit policies, and more
			Shows reports you can run against your servers
			Lets you set up and manage users and passwords, manage your HPSA cores and preferences, and more
			Shows a history of jobs that have run and scheduled jobs waiting to run

Answer:
Exhibit

Library tab	Reports tab	tab name	access
Devices tab	Virtualization tab	Devices tab	Shows all your servers and lets you manage them
Jobs and Sessions tab	Administration tab	Virtualization tab	Shows all your Virtualization Services, Virtual Machines, VM RTemplates, and lets you manage some of them
		Library tab	Shows everything needed to manage servers, such as patches, patch policies, software packages, audit policies, and more
		Reports tab	Shows reports you can run against your servers
		Administration tab	Lets you set up and manage users and passwords, manage your HPSA cores and preferences, and more
		Jobs and Sessions tab	Shows a history of jobs that have run and scheduled jobs waiting to run

QUESTION: 68

What should you use to access the Global File System?

- A. a Global Shell session
- B. a file system client that provide Global File System access on every computer node
- C. a remote terminal session
- D. a terminal window for UNIX servers or an RDP client window for windows servers

Answer: B

QUESTION: 69

What is the process of creating a vendor-recommended patch policy for Solaris servers? (Select two.)

- A. For Solaris 11, HPSA looks at installed packages and computes what needs to be updated based on the existing installations.
- B. For both Solaris 10 and Solaris 11, solipsimport tool automatically creates the vendor-recommended patch policy.
- C. For Solaris 11, HPSA uses the IPS tools to find the recommended patches and their dependencies.
- D. For Solaris 10, HPSA looks at installed packages and computes what needs to be updated based on the existing installations.
- E. For Solaris 10, HPSA uses the IPS tools to find the recommended patches and their dependencies.

Answer: A, D
