XML-Master

I10-002

XML Master- Professional V2

Use XSLT transformation to create XML according to the schema (portions modified for this question) defined by TravelXML.

```
[XML Schema]
<xsd:schema
xmlns:xsd="http://www.w3.org/2001/XMLSchema"
    targetNamespace="http://www.xmlns.org/2003/Trave
XML"
    xmlns="http://www.xmlns.org/2003/TravelXML"
    elementFormDefault="qualified"
    attributeFormDefault="qualified">

<xsd:element name="BookingNotification">
  <xsd:complexType>
  <xsd:sequence>
    <xsd:element name="AccommodationInformation"
minOccurs="1" maxOccurs="1">
      <xsd:complexType>
      <xsd:sequence>

        <xsd:element name="AccommodationName"
minOccurs="1" maxOccurs="1">
          <xsd:simpleType>
            <xsd:restriction base="xsd:string"/>
          </xsd:simpleType>
        </xsd:element>
        <xsd:element name="ChainName"
minOccurs="0" maxOccurs="1">
          <xsd:simpleType>
            <xsd:restriction base="xsd:string"/>
          </xsd:simpleType>
        </xsd:element>
        <xsd:element
name="AccommodationPhoneNumber" minOccurs="0"
maxOccurs="1">
          <xsd:simpleType>
            <xsd:restriction base="xsd:string"/>
          </xsd:simpleType>
        </xsd:element>

      </xsd:sequence>
      </xsd:complexType>
    </xsd:element>
  </xsd:sequence>
  </xsd:complexType>
</xsd:element>
</xsd:schema>
```

Perform XSLT transformation on the "XML Document" using the following "XSLT Style Sheet". Select which of the following correctly describes the results of

performing a validation check on the post-transformation XML against the schema ("XML Schema" referenced when the Exhibit Button is pushed).

```
[XML Document]
<form xmlns="urn:xmlmaster">
  <field1>Sky Star Hotel</field1>
  <field2></field2>
  <field3></field3>
</form>

[XSLT Style Sheet]
<xsl:stylesheet version="1.0"
        xmlns:xsl="http://www.w3.org/1999/XSL/Transform"
        xmlns:fm="urn:xmlmaster"
        exclude-result-prefixes="fm">
  <xsl:template match="/">
    <xsl:element name="BookingNotification"
                 xmlns="http://www.xmlns.org/2003/TravelXML">
      <xsl:element name="AccommodationInformation">

        <xsl:element name="AccommodationName">
          <xsl:value-of select="fm:form/fm:field1" />
        </xsl:element>
        <xsl:if test="fm:form/fm:field2/text()">
          <xsl:element name="ChainName">
            <xsl:value-of select="fm:form/fm:field2" />
          </xsl:element>
        </xsl:if>
        <xsl:if test="fm:form/fm:field3/text()">
          <xsl:element name="AccommodationPhoneNumber">
            <xsl:value-of select="fm:form/fm:field3" />
          </xsl:element>
        </xsl:if>

      </xsl:element>
    </xsl:element>
  </xsl:template>
</xsl:stylesheet>
```

A. The root element (document element) of the post-transformation XML is an empty element, and the post-transformationXML is not valid against the schema
B. The post-transformation XML does not include the required elements defined by the schema (all elements defined oncethey have appeared, namespace reflected); therefore, is not valid
C. The post-transformation XML includes all of the required elements defined by the schema (all elements defined oncethey have appeared, namespace reflected); however, is not valid
D. The post-transformation XML is valid

Answer: D

QUESTION: 39
Use DOM programming to create XML according to the schema defined by NewsML (portions modified for this question). Push the Exhibit Button to load the referenced "XML Document".

```
[XML Document]
<NewsML>
    <NewsItem>
        <ContentItem>
            <DataContent></DataContent>
        </ContentItem>
    </NewsItem>
</NewsML>
```

Load the "XML Document" and update the XML according to the method shown by "DOM Processing". Select which of the following correctly describes the results of performing a validation check on the created XML against the schema ("DTD" and "article.dtd"). Assume that "article.dtd" can be parsed normally during validation. The existence of a document type declaration during validation is not reflected.

```
[DOM Processing]
Create XML using the following method.
    Document output = createXML( doc );
The variable doc here references the Document instance of the loaded XML Document.
Assume no execution errors.

public static Document createXML( Document doc ) {
    Element contentElement = (Element)doc.getElementsByTagName(
                                            "DataContent").item(0);

    Element articleElement = doc.createElement( "article" );
    contentElement.appendChild( articleElement );
    Text textNode = doc.createTextNode( "Start XML Master: Professional Exam" );
    articleElement.appendChild( textNode );

    return doc;
}

[DTD]
<!ENTITY % article SYSTEM "article.dtd">
%article;

<!ENTITY % data " (Encoding | DataContent )?">
<!ELEMENT ContentItem  ( %data; )>
<!ATTLIST ContentItem  Href  CDATA  #IMPLIED >

<!ELEMENT Encoding %data;>
<!ATTLIST Encoding  Notation  CDATA  #REQUIRED >

<!ELEMENT DataContent ANY>

<!ELEMENT NewsItem  (ContentItem*)>
<!ELEMENT NewsML  (NewsItem+)>

[article.dtd]
<!ELEMENT article (#PCDATA)>
<!ATTLIST article  title  CDATA  #REQUIRED >
```

A. The created XML does not include required attributes; therefore, is not valid against the schema

B. The created XML has an illegal attribute value; therefore, is not valid against the schema

C. The created XML does not follow element type declarations; therefore, is not valid against the schema

D. The created XML is valid against the schema

Answer: A

Select which of the following correctly describes the DOM (Level 2) tree after parsing the "XML Document." Note that "&" is a character reference described as "&#x26".
[XML Document] <data>&1t;contents&</data>

A. The data element (Element) value (nodeValue) is "<contents&"
B. The data element (Element) child node is a text node (Text) having a value (nodeValue) of "&1t;contents&#x26"
C. There are three child nodes for the data element (Element)
D. There is no method to know that "&" was a character reference once the DOM tree has been built.

Answer: D

*These questions are for demo purpose only. **Full version** is up to date and contains actual questions and answers.*

Killexams.com is an online platform that offers a wide range of services related to certification exam preparation. The platform provides actual questions, exam dumps, and practice tests to help individuals prepare for various certification exams with confidence. Here are some key features and services offered by Killexams.com:

ORDER FULL VERSION
Special Discount Coupon

Actual Exam Questions: Killexams.com provides actual exam questions that are experienced in test centers. These questions are updated regularly to ensure they are up-to-date and relevant to the latest exam syllabus. By studying these actual questions, candidates can familiarize themselves with the content and format of the real exam.

Exam Dumps: Killexams.com offers exam dumps in PDF format. These dumps contain a comprehensive collection of questions and answers that cover the exam topics. By using these dumps, candidates can enhance their knowledge and improve their chances of success in the certification exam.

Practice Tests: Killexams.com provides practice tests through their desktop VCE exam simulator and online test engine. These practice tests simulate the real exam environment and help candidates assess their readiness for the actual exam. The practice tests cover a wide range of questions and enable candidates to identify their strengths and weaknesses.

Guaranteed Success: Killexams.com offers a success guarantee with their exam dumps. They claim that by using their materials, candidates will pass their exams on the first attempt or they will refund the purchase price. This guarantee provides assurance and confidence to individuals preparing for certification exams.

Updated Content: Killexams.com regularly updates its question bank and exam dumps to ensure that they are current and reflect the latest changes in the exam syllabus. This helps candidates stay up-to-date with the exam content and increases their chances of success.

Technical Support: Killexams.com provides free 24x7 technical support to assist candidates with any queries or issues they may encounter while using their services. Their certified experts are available to provide guidance and help candidates throughout their exam preparation journey.
