QUESTION: 36
Which of the following are two (2) Cyber intelligence sweet spots?

- A. Impact analysis; Detection
- B. Attack tree development; Prevention
- C. Impact: Actor/team analysis
- D. Detection: Attack tree development

Answer: B

Explanation:
* Organizations must evolve, replacing traditional defensive security strategies with a proactive, intelligence-driven offense to prevent and disrupt these threats.
* Documenting attacks in a form of attack trees. One of the most important problems in security analysis is the malefactors' classification and model construction.
Note: With the IBM i2 Enterprise Insight Analysis solution, organizations can proactively develop a comprehensive understanding of their attack surfaces and vulnerabilities and develop referenceable attack scenarios to help speed investigations and remediation. To prevent future attacks, organizations can identify and investigate attackers after an incident. All insights become part of the organization's cyber security strategy and tactics, resulting in stronger and smarter cyber security.

QUESTION: 38

ILE Standard includes full functionality and full administration access.

- A. True
- B. False

Answer: B

Explanation:

IBM i2 Enterprise Insight Analysis Collaborate Add On (previously IBM i2 Enterprise Intelligence Analysis Standard) is designed for other key stakeholders in the organization, including researchers, investigators, front-line personnel, and decision makers. It extends and leverages the valuable intelligence created by the analysts. It provides access to a core subset of capabilities that are delivered through a lightweight browser-based application. These capabilities can help users from outside the traditional intelligence unit work alongside the analysts and perform supportive information collection.
