| Source storage system sends an acknowledgment back to the production compute system | STEP 3 |
| Acknowledgment receipt is provided by the target storage back to the cache of the source | STEP 4 |

Answer:

| | |
|---|---|
| Write I/O is transmitted to the cache of the target storage | Write I/O is received from the production compute system into cache of the source and placed in the queue |
| Write I/O is received from the production compute system into cache of the source and placed in the queue | Write I/O is transmitted to the cache of the target storage |
| Source storage system sends an acknowledgment back to the production compute system | Acknowledgment receipt is provided by the target storage back to the cache of the source |
| Acknowledgment receipt is provided by the target storage back to the cache of the source | Source storage system sends an acknowledgment back to the production compute system |
