**QUESTION: 53**
A customer wants to copy the contents of a previous order to their current order. What rule type do you use to copy the order contents?

A. Data page  
B. Function  
C. Data transform  
D. Declare expression

**Answer: C**

**QUESTION: 54**
You create an application for employees to submit timesheets. Employees enter work, vacation, and sick time for a particular week.
On the entry form, employees see a summary of the total hours entered.
After the employee submits the timesheet, the application displays remaining vacation and sick time for the employee.
To configure the form where users enter hours, select the best configuration option to calculate the total hours for the week.

A. Use a data transform. When the user enters the form, the data transform determines the sum of the work, vacation, and sick time properties.  
B. Use declarative processing. When the value of any work, vacation, or sick time changes, the total hours change.  
C. Use procedural processing. When the value of any work, vacation, or sick time changes and the user submits the form, the total hours change.  
D. Use a When rote. When the value of any work, vacation, or sick time changes, the total hours change.

**Answer: A**

**QUESTION: 55**
You create an employees to submit timesheets. Employees enter week work, vacation, and sick time for a particular week. On the entry form, employees see a summary of the total hours entered. After the employee submits the timesheet, the application displays
remaining vacation and sick time for the employee. You configure the user view that displays remaining vacation and side lime. The balance calculates by subtracting the vacation time and sick time for the week from the current vacation and sick time balances. Which configuration option is used to summarize the remaining vacation and sick time?

A. Use pyDefault and pySetFieldDefaults. When the process invokes the data transforms, the remaining vacation and sick time calculate.
B. Use declarative processing. Whenever the vacation time or sick time entries change, the remaining vacation and sick time calculate.
C. Use procedural processing with a data transform. Remaining vacation and sick time calculate after the user submits a timesheet.
D. Use a When rule. When the application references the remaining vacation and sick time, each value calculates.

Answer: D

QUESTION: 56
A customer views a product available in multiple color options. The customer must select only one color for each product. Which UI control allow a developer to present the user with all color choices at once, without prompting or clicking, while ensuring that the user can only select one of the color options?

A. Text input
B. Radio buttions
C. Drop-down
D. Check box

Answer: B

QUESTION: 57
Which two configurations do you use to validate the minimum age of a new potential customer in the CollectAccountInformation assignment step? (Choose Two)

A. Create and Edit Validate rule to check the customer age.
B. Reference the Edit Validate rule on the CollectAccountInformation flow action.
C. Reference the Validate rule on the CollectAccountInformation flow action.
D. Reference the Validate rule on the CollectAccountInformation assignment.
E. Reference the Edit validate rule on the CollectAccountInformation assignment.
F. Create a Validate rule to check the customer age.

**Answer:** B, D

**QUESTION:** 58
An application must validate postal codes for Canadian customers to match the pattern A1A 1A1, where A represents a letter and 1 represents a number. Which two configuration options allow you to ensure that a user provides a valid postal code?
(Choose Two)

A. Configure a validate rule to test that the entered postal code conforms to the required pattern.
B. Configure the postal code field as a text property with a required input field.
C. Configure a dropdown control to select the postal code based on the specified city and province.
D. Configure an edit validate rule to test that the entered postal code conforms to the required pattern.

**Answer:** C

**QUESTION:** 59
A requirement states: The tax identification number must contain 10 digits. How do you configure the field to support this requirement?

A. Set the minimum and maximum values to "10" in a text field-
B. Use an edit validate rule that validates the tax identification number pattern.
C. Use a decimal property type and make the field required.
D. Configure a validate rule to test the tax identification number pattern.

**Answer:** A

**QUESTION:** 60
A process routes loan requests to a specific loan officer based on the type of loan.
* If the loan is a mortgage, it is routed to Adam Ross.
If the loan is for an automobile, it is routed to Julia Samuels.
If the loan is an equity line, the case is routed to Don Smith.
How do you configure a router to ensure the case advances to the correct loan officer?

A. Route the case to a work queue using a skilled router.
B. Route the case to a work queue using a When condition.
C. Route the case to a worklist using a skilled router.
