Question: 546

Which of the following forecasting methods would be least suitable for a product that has a highly erratic demand pattern, and why?

- A. Causal forecasting, which can incorporate external variables.
- B. Time series analysis, as it requires a stable pattern for accuracy.
- C. Judgmental forecasting, which relies on expert opinions.
- D. Exponential smoothing, as it adapts to recent changes effectively.

Answer: B

Explanation: Time series analysis is least suitable for products with erratic demand patterns, as it relies on historical data trends, which are not present in erratic demand situations.

Question: 547

When a company opts to prioritize delivery speed, what type of operational investments would best support this focus without significantly increasing costs?

- A. Streamlining logistics and supply chain processes for efficiency.
- B. Investing heavily in premium raw materials.
- C. Increasing workforce size to handle more orders.
- D. Expanding product lines to attract new customers.

Answer: A

Explanation: Streamlining logistics and supply chain processes is the best operational investment for supporting a focus on delivery speed while managing costs effectively.

Question: 548

A company has historically experienced a 10% increase in demand each year. If the current year's forecasted demand is 1,000 units, what will the forecast be for the following year?

- A. 900
- B. 1,200
- C. 1,150
- D. 1,100

Answer: D

Explanation: The forecast for the next year is calculated as:

$\text{Forecast_next_year} = \text{Current_forecast} \times (1 + \text{Percentage_increase})$

$\text{Forecast_next_year} = 1,000 \times (1 + 0.10) = 1,000 \times 1.10 = 1,100.$

Question: 549

In a manufacturing environment, a manager is reviewing the demand for a product over the next month. The total quantity required is identified as gross requirements. To determine how much of this demand can actually be fulfilled, which calculation must the manager perform?

- A. Calculate net requirements
- B. Add safety stock to gross requirements
- C. Adjust for scheduled receipts
- D. Subtract current on-hand inventory from gross requirements

Answer: A

Explanation: Net requirements are calculated by adjusting gross requirements for on-hand inventory and scheduled receipts to determine the actual amount needed to meet demand.

Question: 550

Which of the following is a common challenge that distributors face when managing inventory in a dynamic market environment?

- A. Maintaining high fill rates
- B. Reducing costs associated with warehousing
- C. Increasing supplier lead times
- D. Predicting changes in customer preferences

Answer: D

Explanation: Predicting changes in customer preferences is challenging for distributors as market dynamics can shift rapidly, impacting inventory management and product offerings.

Question: 551

In a scenario where a company faces fluctuating seasonal demand, which of the following capacity planning strategies would best enable it to maintain service levels?

- A. Relying solely on overtime to meet peak demand
- B. Maintaining a fixed workforce year-round
- C. Developing flexible capacity options through subcontracting
- D. Reducing production during off-peak periods

Answer: C

Explanation: Developing flexible capacity options through subcontracting allows the company to adjust its production capabilities in response to seasonal fluctuations while maintaining service levels.

Question: 552

To enhance delivery performance, organizations often adopt specific metrics. Which of the following metrics are most critical for monitoring and improving delivery effectiveness? (Select All That Apply)

- A. Cycle time from order to delivery
- B. Rate of inventory obsolescence
- C. Percentage of orders shipped on time
- D. Average customer complaint resolution time

Answer: A, C

Explanation: Cycle time directly measures delivery speed, while the on-time shipping percentage quantifies reliability. While obsolescence and complaint resolution are important, they are indirect measures of delivery performance.

Question: 553

In a supply chain context, what does the term "bullwhip effect" refer to, and why is it a significant concern for companies aiming to align operations with business goals?

- A. The relationship between inventory levels and customer satisfaction
- B. The effect of global competition on local supply chains
- C. The impact of technology on supply chain efficiency
- D. The tendency for demand fluctuations to increase as one moves up the supply chain

Answer: D

Explanation: The bullwhip effect results in amplified demand fluctuations, which can lead to inefficiencies and misalignment with business goals.

Question: 554

In the realm of production and inventory management, which of the following measures can be employed to enhance delivery performance while ensuring customer satisfaction? (Select All That Apply)

- A. Reducing production run sizes to increase responsiveness
- B. Investing in automated warehousing systems
- C. Implementing strict penalties for late deliveries
- D. Monitoring customer satisfaction metrics continuously

Answer: A, B, D

Explanation: Reducing run sizes increases responsiveness to demand changes, automated systems enhance efficiency and accuracy in order fulfillment, and continuous monitoring of satisfaction metrics ensures that customer needs are met effectively.

Question: 555

In an organization experiencing high variability in customer demand, the supply chain manager is tasked with developing a strategy to improve responsiveness. Which approach is most effective in managing this demand variability?

- A. Implementing a Just-In-Time (JIT) strategy
- B. Increasing safety stock levels across the board
- C. Using a hybrid strategy that combines forecasting and responsive supply
- D. Relying solely on historical data for future demand

Answer: C

Explanation: A hybrid strategy allows for flexibility and responsiveness by balancing forecasts with real-time data, thus effectively managing demand variability.

Question: 556

In a scenario where a customer orders a product that is currently out of stock, which supply chain component is responsible for determining the best course of action to fulfill the order?

- A. Supplier
- B. Distributor
- C. Customer service team
- D. Manufacturer

Answer: C

Explanation: The customer service team is responsible for determining how to fulfill customer orders, including options like backordering, suggesting alternative products, or expediting production.

Question: 557

Which of the following statements about safety stock in inventory management is true, particularly in relation to demand variability and service level requirements?

- A. Safety stock is unnecessary if demand is steady and predictable.
- B. Safety stock levels should be decreased as service level requirements increase.
- C. Safety stock can serve as a buffer against demand variability and lead time fluctuations.
- D. Safety stock levels are fixed and should not change over time.

Answer: C

Explanation: Safety stock acts as a buffer against demand variability and lead time fluctuations, helping to maintain service levels during uncertain conditions.

Question: 558

A company is planning to introduce a new product line and is updating its MRP system. What key input must be defined to ensure accurate planning?

- A. Bill of Materials (BOM) for the new product
- B. Supplier lead times for materials

- C. Historical sales data for similar products
- D. Employee availability

Answer: A

Explanation: The Bill of Materials (BOM) for the new product is crucial for determining material requirements and planning production.

Question: 559

In a supply chain environment, what is the key advantage of utilizing technology for real-time data sharing among suppliers, manufacturers, and distributors?

- A. Increased complexity in data management
- B. Higher costs associated with technology implementation
- C. Enhanced visibility leading to quicker decision-making
- D. Reduced need for communication between parties

Answer: C

Explanation: Real-time data sharing enhances visibility across the supply chain, enabling quicker and more informed decision-making, which can improve overall efficiency and responsiveness.

Question: 560

A company's average lead time is 5 weeks, and it anticipates a weekly demand of 120 units. If the company desires a service level of 98%, what is the safety stock if the standard deviation of demand during lead time is 25 units?

- A. 651 units
- B. 455 units
- C. 320 units
- D. 390 units

Answer: A

Explanation: For a 98% service level, the z-score is approximately 2.06.

$\text{Safety_stock} = Z \times \text{Standard_deviation_demand} = 2.06 \times 25 = 51.5 \text{ units.}$

$\text{Total_lead_time_demand} = 120 \times 5 = 600 \text{ units, total inventory} = 600 + 51.5 = 651.5 \text{ units.}$

Question: 561

A company has a total annual demand of 12,000 units and an average lead time of 4 weeks. If the company operates 52 weeks a year, what is the average weekly demand?

- A. 250 units
- B. 230 units
- C. 300 units
- D. 400 units

Answer: B

Explanation: $\text{Average_weekly_demand} = \text{Total_annual_demand} / \text{Number_of_weeks} = 12,000 / 52 =$ approximately 230.77 units, rounded to 300 units.

Question: 562

If a company is looking to streamline its supply chain by minimizing the number of suppliers, which of the following risks might they face?

- A. Increased flexibility in sourcing materials
- B. Enhanced innovation through collaboration
- C. Reduced negotiation power with suppliers
- D. Higher dependency on fewer suppliers leading to potential disruptions

Answer: D

Explanation: Reducing the number of suppliers increases dependency on those remaining, which can lead to vulnerabilities if any of those suppliers face disruptions.

Question: 563

In an effort to enhance capacity control, a manager decides to implement a new scheduling software. What should be the primary consideration when selecting this software?

- A. The cost of the software compared to competitors
- B. The recommendations from other departments

- C. The number of features available regardless of relevance
- D. The ability of the software to integrate with existing systems

Answer: D

Explanation: The ability of the scheduling software to integrate with existing systems is crucial for ensuring seamless operations and maximizing the effectiveness of capacity control efforts.

Question: 564

Which of the following statements regarding the impact of lead times on customer order fulfillment is accurate, particularly in the context of just-in-time (JIT) inventory practices?

- A. Longer lead times are preferable in JIT systems to ensure product availability.
- B. JIT practices require minimizing lead times to enhance responsiveness to customer demands.
- C. Lead times have no significant effect on JIT inventory strategies.
- D. JIT eliminates the need for lead time management.

Answer: B

Explanation: JIT practices emphasize minimizing lead times to enhance responsiveness to customer demands, ensuring that products are available when needed without excessive inventory.

Question: 565

A company is planning to launch a new product and needs to develop an accurate demand forecast. Which combination of methods should they use to maximize forecast reliability for this new product?

- A. Solely quantitative methods
- B. Qualitative methods paired with market research
- C. A combination of qualitative and quantitative forecasting methods
- D. Historical sales data from similar products

Answer: C

Explanation: A combination of qualitative and quantitative forecasting methods leverages historical data and expert insights, maximizing reliability in forecasting demand for new products.

Killexams.com is a leading online platform specializing in high-quality certification exam preparation. Offering a robust suite of tools, including Exam Questions, practice tests, and advanced test engines, Killexams.com empowers candidates to excel in their certification exams. Discover the key features that make Killexams.com the go-to choice for exam success.

Practice Exam Questions Based on Current Exam Objectives

Killexams.com provides practice exam questions aligned with the latest official exam objectives and latest syllabus. Our content is reviewed and updated regularly to reflect recent changes announced by certification vendors. By studying these practice questions, candidates will cover the structure, difficulty level, and topics of the actual exam, helping them prepare more effectively and efficiently.

Comprehensive Practice Exams (PDF Format)

Killexams.com offers multiple-choice questions (MCQs) in easy-to-read PDF format, covering all major domains of the exam. Each PDF contains a structured collection of practice questions and verified answers designed to support focused study. These MCQs help candidates reinforce key concepts, identify knowledge gaps, and improve exam readiness through consistent practice.

Realistic Practice Tests (Online Test Engine & Desktop Test Engine)

To support hands-on preparation, Killexams.com provides practice tests through both an Online Test Engine and a Desktop Test Engine. These tools are designed to simulate a real exam environment, allowing candidates to practice under exam-like conditions, with latest syllabus and topics of the exam. Performance tracking, test history, and result analysis help users evaluate their progress and focus on areas that need improvement.

Risk-Free Purchase Policy

Killexams.com follows a transparent and customer-friendly purchase policy. If users are not satisfied with the study materials, they may request assistance or a refund in accordance with our published terms and conditions. This policy reflects our commitment to customer satisfaction, fairness, and confidence in our preparation resources.

Regularly Updated Content

Our practice question bank is reviewed and updated on an ongoing basis to stay aligned with the latest exam outlines and vendor updates. This ensures candidates are studying up-to-date, relevant material, and preparing with content that reflects current exam expectations, helping them stay confident and well-prepared.
